PROFESSIONAL SUMMARY

Software engineer who builds and ships production systems end-to-end across backend, web, and mobile. Backend APIs and microservices with NestJS and FastAPI, frontends with React and Next.js, and mobile apps with Flutter using Clean Architecture. Owns the full lifecycle from architecture to deployment, with a strong CS and AI foundation and hands-on experience integrating ML and computer-vision components into real products.

CORE COMPETENCIES

Full-Stack Development

Backend & Microservices

System Architecture & Design

REST API Design

Mobile Development (Flutter)

Docker & Linux

Clean Architecture

AI / ML Integration

WORK EXPERIENCE

Dusens Research (Dusens Group)

Oct 2025 - Present

Software Engineer (Part-time) · Algeria

- Architecting and building internal tools and AI-integrated services within a newly formed AI department, owning design through deployment.
- Designing project architectures for AI pipeline integration, including model deployment and data-processing workflows.

University of Doha for Science and Technology (UDST)

Feb 2026 - Jul 2026

AI Research Intern · Qatar

- Conducting my final-year project, "Detecting Physical Adversarial Attacks on Advanced Driver Assistance Systems," alongside additional faculty research projects in applied AI.

Spinet NFC

Oct 2025 - Jan 2026

Backend Software Engineer (Part-time) · Algeria

- Developed backend services for a CRM platform using NestJS in a microservice architecture.
- Designed and implemented scalable, maintainable REST APIs.

NYU Abu Dhabi (NYUAD)

Jul 2024 - Sep 2024

AI Research Intern · UAE

- Contributed to deep reinforcement learning for automatic code optimization in the Tiramisu compiler (C++).
- Simplified the Tiramisu compiler build process.

Optimus LPE

Jun 2024 - Sep 2024

Software Engineering Freelancer · Algeria

- Developed and optimized features for ATEX equipment-inspection management software, streamlining safety workflows and regulatory compliance for hazardous-environment equipment.

SARL Basseer Innovation & Technology

Summers 2023 & 2024

Edge AI / Software Engineer Intern · Algeria

- Built real-time computer-vision systems on NVIDIA Jetson: face identification (SCRFD/YOLO + ArcFace + DeepSORT) and fire/smoke detection (YOLOv8), with MQTT for low-latency on-device inference and backend communication.

PROJECTS

Syllabri - AI Education Platform

Founder & Engineer

Full-stack AI learning platform taken from concept to live MVP solo. FastAPI backend with an asynchronous PDF ingestion pipeline (OCR, automated topic extraction); React frontend with topic-scoped AI chat, explanations, and dynamic quiz generation.

FastAPI · React · LLMs · OCR · async pipelines · [syllabri.vercel.app](#)

Notiverse - Smart Notes Mobile App

Founder & Engineer

Production, offline-first notes app published on app stores. Built with Flutter following Clean Architecture, with Riverpod for state management; supports text and image notes.

Flutter · Riverpod · Clean Architecture · offline-first · [notiverse.app](#)

EDUCATION

Master's & Engineering Degree (Ingénieur), Artificial Intelligence & Data Science - National School of Artificial Intelligence (ENSIA)

2021 - 2026

Five-year engineering program (Bac+5) with a strong software engineering foundation. Final-year project: Detecting Physical Adversarial Attacks on Advanced Driver Assistance Systems.

CERTIFICATIONS

NVIDIA Deep Learning

NVIDIA

2022

SKILLS

Languages: C++, Python, JavaScript, TypeScript, Dart, Java, HTML/CSS

Frameworks & Tools: React, Next.js, Node.js, NestJS, Express.js, FastAPI, Django, Flutter, Docker, Linux, Git, PyTorch, TensorFlow, LangChain

Concepts: System Architecture, Microservices, REST APIs, Clean Architecture, Full-Stack & Mobile Development, Computer Vision, Machine Learning
